

## Our Approach

“At RTIS we expect our software to fit your business, not the other way around.”

The use of information technology is fast becoming common in all areas of business activities — the challenge is how to harness the potential of available solutions and ensure the best returns are achieved for the investment required. RTIS are software developers who meet this challenge by focusing on the working dynamics of the business environment as well as technical requirements. We utilise proven development processes and methods to ensure IT initiatives deliver benefits aligned with business objectives.

RTIS offer a range of existing modules covering key business functions. These modules act as templates which can be modified and extended with bespoke development on the premise that your business does not run exactly the same as others.

### Key Features

- *Experience in translating Business operations into software solutions*
- *Role/Process orientated system design*
- *Quick configured solutions based around existing modules*
- *Additional bespoke development when required*
- *Communication with shop floor machinery and bar-coding*
- *Integration with existing IT, including accounts packages and Office applications*
- *Experience in translating business operations into software solutions*
- *On-going support if required*

- **Project Tracking**
- **Credit Control**
- **Time & Attendance**
- **Resource Management**
- **Vehicle Mileage Administration**

**INTEGRATION** Although we can provide comprehensive integrated solutions, we often work with existing systems; for example providing a departmental solution within a large corporate or transforming a series of spread-sheets to a multi-user database. We can link into existing database platforms so that data can be shared or transferred and integrate with accounting and legacy systems. We also have experience in providing for connectivity and collaboration between departments and companies.

RTIS can demonstrate a successful track record and reference sites. Please contact us to discuss your requirements and arrange for a demonstration.
